Konstantinos Konstantinidis

Ph.D., Iowa State University

515-357-2016 | k.m.konstantinidis@gmail.com | kkonstantinidis.github.io | github.com/kkonstantinidis

SKILLS

Proficient: Python • Java • AWS • MATLAB • PyTorch • MPI • MapReduce

Good: C++ • SQL • Hadoop • NumPy • Bash • Git • Jenkins

EDUCATION

Iowa State University

Ames, IA

Ph.D. & M.Eng., Electrical and Computer Engineering, GPA: 3.94/4, Advisor: Prof. Aditya Ramamoorthy.

Dec. 2022

Technical University of Crete

Chania, Greece

Diploma (5-year program), Electrical and Computer Engineering, GPA: 3.4/4, Advisor: Prof. George Karystinos.

Dec. 2016

Industry Experience

Research Scientist at Meta Platforms, Inc. (Facebook)

Menlo Park, CA | 12/2023 - Present

Systems & Infrastructure.

Software Engineer, Platform at C3.ai, Inc.

Redwood City, CA | 09/2022 - 11/2023

As a member of the Platform - Data team, I developed C3.ai's feature store system that stores and serves machine learning features. My work involved alleviating bottlenecks identified through algorithmic analysis and profiling (e.g., YourKit) across the data pipeline, hence improving the latency of feature serving and enabling the system to scale distributively across multiple nodes.

Software Engineer Intern at Meta Platforms, Inc. (Facebook)

Menlo Park, CA | 05/2022 - 08/2022

Developed debugging tools for machine learning feature authoring used in Facebook Marketplace. The implemented framework categorizes errors during feature compilation, generates alerts, and assigns tasks to the appropriate team; I integrated it with the CI/CD. Another end product of my work was a UI tool to retrieve and transform feature values from low-latency storage.

Software Engineering Intern, Platform at C3.ai, Inc.

Redwood City, CA | 06/2021 - 08/2021

Implemented a framework for cluster failure prediction; its first component is the data pipeline which loads cluster health metrics, handles missing data, and creates a training data set. The second component is the ML pipeline which trains a model and predicts the cluster's state using streaming data. Followed the process of continuous integration / continuous deployment (CI/CD).

Research Projects

ByzShield: Robust distributed learning | Python, PyTorch, AWS, MPI, Bash.

01/2020 - 04/2021

Developed a defense for distributed learning in which computing devices may return erroneous or malicious gradients. The method achieves a 20% increase in top-1 accuracy on the CIFAR-10 dataset and a 36% reduction in the fraction of corrupted gradients.

CAMR: Aggregated MapReduce over multiple jobs | Python, AWS, MPI, Bash.

12/2018 = 04/2020

Proposed a method to reduce the MapReduce communication overhead for aggregate functions. It achieves state-of-the-art communication load but requires an exponentially smaller number of jobs and achieved speedup $4.3 \times$ over the baseline approach.

Staggler mitigation in matrix multiplication | Python, MPI, AWS.

07/2018 - 01/2019

Proposed and implemented a technique to tolerate the presence of servers that suffer from slow computation. Our algorithm can alleviate a higher number of slow servers and requires 80% of the time needed by prior methods on actual AWS EC2 simulations.

MapReduce communication load reduction | C++, AWS, MPI, Hadoop, HDFS, Bash.

05/2017 - 12/2018

Proposed an algorithm to reduce **MapReduce** communication load; it uses *Single Parity Check* codes and design theory to assign tasks to servers and splits files less finely than prior work. Tweaked the **TeraSort** algorithm (to sort data sets in **HDFS**). The method uses **MPI** for communication. It supersedes the state-of-the-art by $2.6 \times$ and the baseline approach by $4.7 \times$ on AWS EC2 clusters.
